Over 2.5 goals: V4 report

Mon 09 Nov 2026 to Fri 13 Nov 2026 (combined). All times UK.

Executive summary

21 fixtures analysed: High 1, Medium 1, Weak 1, rejected 18. Selected fixtures with both attacks scoring 2+ in 3 of 5 or better: 1.

Selection engine: the validated model (V4 lock; V4.1 changes in config/model_config.json). Benchmark, season 2026-27 to 2026-11-08 (1824 finished fixtures, Rob's 14 leagues, clean out of sample): 3+ goals in High 84 of 119, Medium 145 of 235, trump card 3 of 4, rejected 812 of 1466. Band counts, not the chance of any one fixture. Scored 2+ and Let in 2+ counts are shown on every card as supporting evidence; both attacks at 3 of 5+ adds about three points inside the bands and is highlighted, not required.

Selected fixtures ranked by model score (up to 20)

#	Kick-off (UK)	Competition	Fixture	Home sc2+ / let2+	Away sc2+ / let2+	Both 3/5+	BTTS	Confidence	Division	Main risk (Over 2.5 = Yes for every row)

Data coverage and limitations

• Fixtures analysed: 21. Every count is taken from the stored final score of each match (fixture ID, teams, score); the five scorelines are printed on each card.

• Form sample: each side's last five completed league games this season, cup ties excluded; venue rows use the last five league games at that venue, sample size shown when fewer.

• Not covered by API Sports for 2026-27: Northern Premier, Isthmian and Southern League Division One. 'England V2' is not an API Sports competition and was not included.

• Scored first / conceded after leading: needs match event timelines, not pulled (one call per match, no history). Not shown. First-half goals: available from half-time scores, not yet on the card.

• Injuries and suspensions: the API returned lists for a minority of fixtures this week; nothing is inferred where it returned none. Squad rotation in cup ties is not assessed.

• Opposition strength: each side's opponents' scoring versus the division is held in the analysis file (oq columns) but is not part of the alignment score.

Methodology (V4 lock)

• Selection: gradient-boosted model on each side's last-5 league counts (goals, 3+, 2+ scored, 2+ conceded, clean sheets, failed to score, BTTS), last-3 venue counts and the division's 3+ share. Trained on 2023-24 and 2024-25, validated on 2025-26; cut points from validation deciles. High = top decile; Medium = next two; Weak = bottom quarter of Medium; rejected below.

• Benchmark, season 2026-27 to 2026-11-08 (1824 finished fixtures, Rob's 14 leagues, clean out of sample): 3+ goals in High 84 of 119, Medium 145 of 235, trump card 3 of 4, rejected 812 of 1466. Band counts, not the chance of any one fixture.

• Cup competitions (European and domestic cups), measured separately, season 2026-27 (1606 finished ties): 3+ goals in High 31 of 47, Medium 119 of 197, trump card 2 of 3, rejected 794 of 1359. Cup ties are outside the 14-league benchmark; treat cup selections with that in mind.

• Scored 2+ and Let in 2+ are shown for both sides as evidence. Both attacks 3 of 5+ is highlighted (Selected with it 66%, High 71%) but never required: High fixtures failing a 2-of-5 attacking rule hit 73% on 222 fixtures.

• BTTS (V4.1): YES when the BTTS model is in its High band or the fixture is a trump card; lean YES for the Medium band; no lean for the Low band. BTTS model bands, same fixtures: High 118 of 183, Medium 805 of 1440, Low 121 of 201 had both teams score. A lean, not a pick, and never a veto on Over 2.5.

• V2 and V3 alignment scores were tested (62 to 66% at comparable sizes) and are not used for selection. Full tables in docs/backtest_baseline.md.

• No averages anywhere. Nothing inferred for missing data. Every count comes from stored final scores; the five scorelines are printed on each card.
